CSE310 Programming Assignment #2

How to run analysis_pcap_arp.py

- 1) Run analysis_pcap_arp.py
- 2) You will then be prompted to enter a file name
- 3) After entering a file name, it will then output all the information for each flow
- 4) To enter a new file, run analysis_pcap_arp.py again

The program will return the first ARP message exchange that occurs, meaning the one that produces the response first for the corresponding request, not necessarily the first request.
